

AAP Recommended Schedule of Well-Child Care Visits

At The Pediatric Clinic, we follow the general guidelines set by the American Academy of Pediatrics. Depending on your child's growth and development, as well your concerns and experience, additional or fewer appointments may be suggested by your pediatrician. Visits can include physical measurements, patient history, sensory screenings, behavioral assessments, and planned procedures (immunizations, screenings and other tests) at the following suggested intervals:

- 3 to 5 days
- 1 month
- **2 months***
- **4 months***
- **6 months***
- 9 months
- **12 months***
- 15 months
- **18 months* with autism screening****
- **24 months***
- 30 months
- 3 years
- **4 years***

And once every year thereafter for an annual health supervision visit that includes a physical exam as well as a developmental, behavioral, and learning assessment.

Patients on chronic medications also require yearly examinations and our patients who are prescribed medications for ADHD, require a physical every six months.

*Routine immunizations are to be administered – see our immunization section on this website for more information as well as our recommended Tylenol dosages.

**All children at 18 months old will be screened for autism using the

"M-CHAT". You may download the questionnaire from this website and complete prior to your visit (strongly advised if you will not be present at your child's visit).
